EDUCATION

Institute of Aeronautical Engineering, Hyderabad, India *April 2026*
B.Tech in Computer Science and Engineering (Data Science) GPA: 8.07/10

J N Govt. Polytechnic, Hyderabad Apr 2023
Diploma in Electrical and Electronics Engineering GPA: 8.41/10

Krishnaveni High School, Peddapalli March 2020
SSC GPA: 10.0/10

TECHNICAL SKILLS

Programming: Python, SQL, Java (Basic)
AI & Machine Learning: Classification, Regression, Clustering, CNNs, Transfer Learning, Feature Engineering, Model Evaluation
Generative AI: RAG, Vector Databases, Embedding Models, Prompt Engineering,Langchain,Langgraph
Data Engineering: Data Preprocessing, ETL Pipelines, Statistical Analysis
Cloud & Backend: FastAPI, Flask, REST APIs, Docker, AWS
Databases & Tools: PostgreSQL, MongoDB, Redis, Git, GitHub, Power BI

WORK EXPERIENCE

Makri Solutions Private Limited, Hyderabad May – June 2024

Data Analysis Intern – GitHub

- Analyzed Annual Health Survey (AHS) data covering **21M+ individuals** and **4.32M+ households** across **9 North Indian states** through data acquisition, preprocessing, transformation, and exploratory data analysis.
- Built interactive healthcare dashboards to analyze IMR, MMR, TFR, fertility, institutional deliveries, and demographic indicators for district-level healthcare insights.
- Improved reporting reliability by validating datasets, developing data models, and delivering accurate KPI-driven healthcare reports.

Tech Stack: Python, Pandas, NumPy, Matplotlib, Seaborn, Plotly, Power BI, Power Query, DAX, Excel, Jupyter Notebook

PROJECTS

ChatPlug – Multi-Tenant RAG Platform (GitHub) March 2026 – June 2026

- Engineered a multi-tenant Retrieval-Augmented Generation (RAG) platform that enables businesses to create isolated AI knowledge bases from uploaded documents for secure, tenant-specific question answering.
- Designed an end-to-end document ingestion and retrieval pipeline with text extraction, semantic chunking, BGE embeddings, vector indexing, cross-encoder reranking, and tenant-aware retrieval to improve response relevance and prevent cross-tenant data leakage.
- Deployed the platform as a production-ready AI service on AWS using FastAPI, Qdrant, Redis, and Docker, where it is actively was used by a client for enterprise knowledge retrieval and AI-powered chatbot interactions.

Tech Stack:
Python, FastAPI, Supabase, Redis, Qdrant, BGE Embeddings, Cross-Encoder Reranking, Groq, Docker, AWS EC2

MLOps Movie Recommendation System (GitHub) Dec 2025 – Jan 2026

- Built a movie recommendation system where users enter a movie title and receive similar movie recommendations based on genres, cast, keywords, director, and plot descriptions.
- Implemented a recommendation pipeline that matches the user-selected movie, converts movie metadata into TF-IDF embeddings, computes cosine similarity scores, and returns the most relevant movies.
- Deployed the application using Flask, Docker, AWS S3, and REST APIs for scalable recommendation serving and model artifact management.

Tech Stack: Python, Scikit-learn, TF-IDF Embeddings, Cosine Similarity, Flask, MongoDB, AWS S3, Docker, REST APIs

CERTIFICATIONS

GenAI Powered Data Analytics Job Simulation – Forage July 2025
LLM Engineering: Master AI, Large Language Models & Agents – Udemy Apr - May 2025

E-PORTFOLIOS

- **Portfolio: https://dandu-yeshwanth1809-portfolio.vercel.app/** — Projects, skills, and technical challenges.
- **GitHub: github.com/YeshwanthDandu180903** — Code repositories showcasing machine learning, deep learning, and deployment projects.
